

PlaceMux Growth Experimentation — Experiment Report

Generated 2026-07-25 14:22 UTC · All figures computed live from placemux.db

Resume Upload Simplification

Experiment ID: exp_1001

Executive Summary

DECISION: Ship

Ship to 100% — application_conversion improved +9.90% (95% confidence, no guardrail regressions).

Business Goal	Increase completed job applications by reducing resume-upload friction
Hypothesis	A one-click resume autofill increases the share of sessions that end in a submitted application without h
Owner	growth-pm@placemux.com
Experiment Window	2026-04-01 to 2026-04-21
Decision Date	2026-04-24
Traffic	Control n=4,502 / Treatment n=4,498

Primary Metric — Statistical Readout

Field	Value
Test used	Two-Sample Z-Test (pooled proportions)
Control N / mean	4,502 / 0.231008
Treatment N / mean	4,498 / 0.253891
Absolute difference	0.022882
Relative difference	9.905%
Standard error	0.009032
Test statistic	2.5327
P-value	0.01132
95% CI	[0.00518, 0.040584]
99% CI	[-0.000382, 0.046147]
Margin of error (95%)	0.017702
Significant @95% / @99%	True / False
Statistical power	0.7168
Min. detectable effect	0.025348
Low-sample warning	False

Secondary Metrics

session_duration

Field	Value
-------	-------

Test used	Welch's T-Test (unequal variance)
Control N / mean	4,502 / 239.492
Treatment N / mean	4,498 / 241.8844
Absolute difference	2.3924
Relative difference	0.999%
Standard error	1.1623
Test statistic	2.0584
P-value	0.039585
95% CI	[0.1144, 4.6704]
99% CI	[-0.6015, 5.3863]
Margin of error (95%)	2.278
Significant @95% / @99%	True / False
Statistical power	0.5392
Min. detectable effect	3.2562
Low-sample warning	False

revenue_per_user

Field	Value
Test used	Welch's T-Test (magnitude) + Mann-Whitney U (significance, p=0.007195)
Control N / mean	4,502 / 4.2322
Treatment N / mean	4,498 / 4.7577
Absolute difference	0.5255
Relative difference	12.416%
Standard error	0.1832
Test statistic	2.8688
P-value	0.007195
95% CI	[0.1665, 0.8845]
99% CI	[0.0537, 0.9973]
Margin of error (95%)	0.359
Significant @95% / @99%	True / True
Statistical power	0.8183
Min. detectable effect	0.5132
Low-sample warning	False

Sample Ratio Mismatch (SRM) Check

No SRM detected (severity: None)

Expected split	50% / 50%
Observed split	50.0% / 50.0%
Chi-square / p-value	0.0018 / 0.9663682

Recommendation

No sample ratio mismatch detected. Assignment ratio is consistent with the intended randomization. Re

Guardrail Metrics

Metric	Control	Treatment	Rel. change	P-value	Regression?
crash_rate	0.0098	0.0111	+13.7%	0.5310	no
error_rate	0.0195	0.0189	-3.3%	0.8224	no

Recommendation & Reasoning

- No statistically significant guardrail regressions detected.
- Primary metric 'application_conversion': control=0.231008, treatment=0.253891, relative lift=+9.90%, p-value=0.01132 (Two-Sample Z-Test (pooled proportions)).
- 95% CI for the difference: [0.00518, 0.040584].
- Effect is statistically significant at 95% confidence and the +9.90% relative lift is practically meaningful ($\geq 1.0\%$ threshold).
- Observed statistical power: 0.72.

Aggressive Push Notification Frequency

Experiment ID: exp_1002

Executive Summary

DECISION: No Ship

Do Not Ship — guardrail regression on cancellation_rate, error_rate, refund_rate.

Business Goal	Increase weekly active usage via higher-frequency push reminders
Hypothesis	Sending 3x more push notifications per week increases re-engagement and application conversion
Owner	growth-pm@placemux.com
Experiment Window	2026-04-05 to 2026-04-25
Decision Date	2026-04-28
Traffic	Control n=4,320 / Treatment n=4,180

Primary Metric — Statistical Readout

Field	Value
Test used	Two-Sample Z-Test (pooled proportions)
Control N / mean	4,320 / 0.237963
Treatment N / mean	4,180 / 0.245933
Absolute difference	0.00797
Relative difference	3.349%
Standard error	0.009292
Test statistic	0.8578
P-value	0.390975
95% CI	[-0.010242, 0.026182]
99% CI	[-0.015965, 0.031905]
Margin of error (95%)	0.018212
Significant @95% / @99%	False / False
Statistical power	0.1376
Min. detectable effect	0.026352
Low-sample warning	False

Secondary Metrics

session_duration

Field	Value
Test used	Welch's T-Test (unequal variance)
Control N / mean	4,320 / 241.2607
Treatment N / mean	4,180 / 240.437

Absolute difference	-0.8238
Relative difference	-0.341%
Standard error	1.1962
Test statistic	-0.6886
P-value	0.49107
95% CI	[-3.1684, 1.5208]
99% CI	[-3.9051, 2.2575]
Margin of error (95%)	2.3446
Significant @95% / @99%	False / False
Statistical power	0.1059
Min. detectable effect	3.3505
Low-sample warning	False

Sample Ratio Mismatch (SRM) Check

No SRM detected (severity: None)

Expected split	50% / 50%
Observed split	50.8% / 49.2%
Chi-square / p-value	2.3059 / 0.12888507
Recommendation	No sample ratio mismatch detected. Assignment ratio is consistent with the intended randomization. Re

Guardrail Metrics

Metric	Control	Treatment	Rel. change	P-value	Regression?
cancellation_rate	0.0187	0.0294	+56.9%	0.0013	YES
error_rate	0.0234	0.0306	+31.0%	0.0392	YES
refund_rate	0.0083	0.0182	+118.2%	0.0001	YES

Recommendation & Reasoning

- Guardrail 'cancellation_rate' regressed: control=0.0187 -> treatment=0.0294 (+56.9% relative, p=0.0013, statistically significant at 95%).
- Guardrail 'error_rate' regressed: control=0.0234 -> treatment=0.0306 (+31.0% relative, p=0.0392, statistically significant at 95%).
- Guardrail 'refund_rate' regressed: control=0.0083 -> treatment=0.0182 (+118.2% relative, p=0.0001, statistically significant at 95%).
- One or more guardrail metrics moved significantly in the harmful direction. Per policy, guardrail regressions block shipping regardless of the primary-metric result.

New Job Recommendation Ranking Model

Experiment ID: exp_1003

Executive Summary

DECISION: No Ship

Do Not Ship — no statistically significant effect detected on application_conversion (adequately powered).

Business Goal	Improve relevance of recommended jobs to increase application conversion
Hypothesis	A learning-to-rank model for job recommendations increases application conversion vs. the recency-bas
Owner	search-ranking@placemux.com
Experiment Window	2026-04-10 to 2026-04-30
Decision Date	2026-05-03
Traffic	Control n=2,028 / Treatment n=1,972

Primary Metric — Statistical Readout

Field	Value
Test used	Two-Sample Z-Test (pooled proportions)
Control N / mean	2,028 / 0.236193
Treatment N / mean	1,972 / 0.252535
Absolute difference	0.016342
Relative difference	6.919%
Standard error	0.01359
Test statistic	1.2027
P-value	0.229088
95% CI	[-0.010293, 0.042977]
99% CI	[-0.018662, 0.051347]
Margin of error (95%)	0.026635
Significant @95% / @99%	False / False
Statistical power	0.2252
Min. detectable effect	0.038619
Low-sample warning	False

Secondary Metrics

revenue_per_user

Field	Value
Test used	Welch's T-Test (magnitude) + Mann-Whitney U (significance, p=0.190633)
Control N / mean	2,028 / 4.251
Treatment N / mean	1,972 / 4.6277

Absolute difference	0.3767
Relative difference	8.862%
Standard error	0.2706
Test statistic	1.3923
P-value	0.190633
95% CI	[-0.1536, 0.907]
99% CI	[-0.3202, 1.0737]
Margin of error (95%)	0.5303
Significant @95% / @99%	False / False
Statistical power	0.2858
Min. detectable effect	0.7577
Low-sample warning	False

Sample Ratio Mismatch (SRM) Check

No SRM detected (severity: None)

Expected split	50% / 50%
Observed split	50.7% / 49.3%
Chi-square / p-value	0.784 / 0.37592058
Recommendation	No sample ratio mismatch detected. Assignment ratio is consistent with the intended randomization. Re

Guardrail Metrics

Metric	Control	Treatment	Rel. change	P-value	Regression?
error_rate	0.0242	0.0198	-18.1%	0.3445	no
bounce_rate	0.2830	0.2982	+5.3%	0.2918	no

Recommendation & Reasoning

- No statistically significant guardrail regressions detected.
- Primary metric 'application_conversion': control=0.236193, treatment=0.252535, relative lift=+6.92%, p-value=0.229088 (Two-Sample Z-Test (pooled proportions)).
- 95% CI for the difference: [-0.010293, 0.042977].
- Result is not statistically significant (p=0.229088) and the experiment was adequately powered to detect a practically meaningful effect. This is honest evidence of no meaningful effect on the primary metric.

Onboarding Checklist Redesign

Experiment ID: exp_1004

Executive Summary

DECISION: Rollback

Do Not Ship — Sample Ratio Mismatch invalidates this readout.

Business Goal	Increase activation (profile completion) for new signups
Hypothesis	A shorter, gamified onboarding checklist increases new-user activation
Owner	activation-pm@placemux.com
Experiment Window	2026-04-12 to 2026-05-02
Decision Date	2026-05-05
Traffic	Control n=4,169 / Treatment n=2,831

Primary Metric — Statistical Readout

Field	Value
Test used	Two-Sample Z-Test (pooled proportions)
Control N / mean	4,169 / 0.246102
Treatment N / mean	2,831 / 0.24267
Absolute difference	-0.003432
Relative difference	-1.394%
Standard error	0.01046
Test statistic	-0.3278
P-value	0.743087
95% CI	[-0.023934, 0.01707]
99% CI	[-0.030376, 0.023513]
Margin of error (95%)	0.020502
Significant @95% / @99%	False / False
Statistical power	0.0624
Min. detectable effect	0.029956
Low-sample warning	False

Secondary Metrics

session_duration

Field	Value
Test used	Welch's T-Test (unequal variance)
Control N / mean	4,169 / 240.7237
Treatment N / mean	2,831 / 239.2541

Absolute difference	-1.4696
Relative difference	-0.611%

Min. detectable effect	3.7703
Low-sample warning	False

Sample Ratio Mismatch (SRM) Check

SRM DETECTED (severity: High)

Expected split	50% / 50%
Observed split	59.6% / 40.4%
Chi-square / p-value	255.7491 / 0.0
Recommendation	Severe SRM detected. The randomization is broken for this experiment. All primary-metric, guardrail, and

Guardrail Metrics

Metric	Control	Treatment	Rel. change	P-value	Regression?
error_rate	0.0204	0.0215	+5.7%	0.7392	no
bounce_rate	0.3015	0.2875	-4.6%	0.2085	no

Recommendation & Reasoning

- Sample Ratio Mismatch detected (control=4169, treatment=2831, expected 50/50, chi2 p=0.0).
- Randomization integrity cannot be confirmed, so the primary-metric and guardrail results below cannot be trusted for a ship decision.
- Severe SRM detected. The randomization is broken for this experiment. All primary-metric, guardrail, and CI results below are INVALID and must not be used for a ship/no-ship decision. Halt the experiment, fix the assignment pipeline, and re-launch.
